

# IN COSTITX WE DO IT WELL!

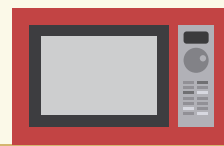

Simple things we can do to fight climate change from home.

Choose class A + energy efficient appliances.

Make use of the fully-loaded washing machine and dishwasher, and do not abuse detergents, bleach or polishes.

Reuse non-disposable items and separate waste into: organic matter, glass, paper and cardboard, light packaging and non-recyclable waste.

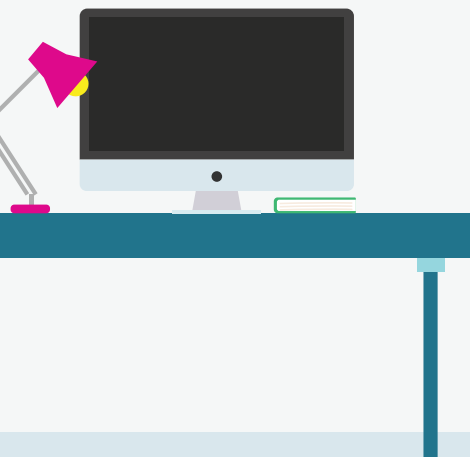

Avoid buying disposable plastic utensils and choose reusable ones.

Use low-energy light bulbs or led technology, they radiate less heat, they are more resistant, they last longer and they consume less energy than incandescent or halogen bulbs.  
Unplug appliances when not in use!

Low power mode reduces the amount of power your electronics and appliances use. Avoid using standby mode because consumes more than 30% of the total energy. Choose renewable energies and go green!

Save 170 litres per month when you regularly check for damages and water leaks.

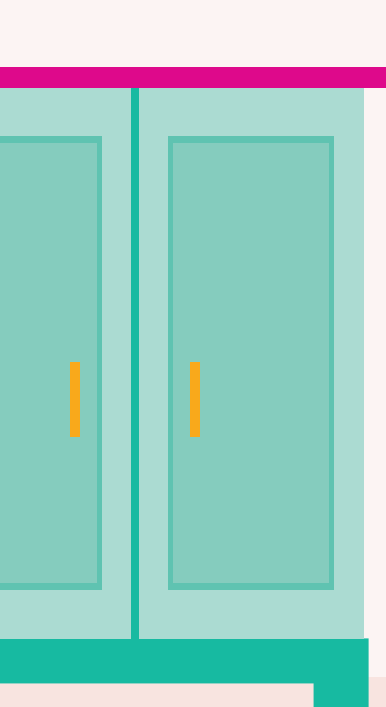

Install flow restrictors on taps, shower telephones and water tanks. You will save 40% of water consumption.

Shower in 5 minutes. Filling up the bathtub uses 150 litres more of water.

Turn off the tap when not in use to save 12 liters per minute.

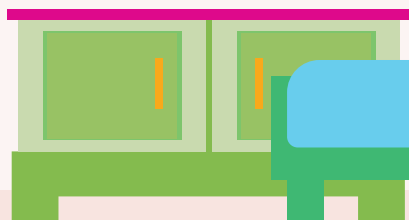

Repair electronics and appliances. Avoid buying new ones when you don't need them.

Insulate doors and windows to prevent heat loss. Air out your house for only 10 minutes. Maintain the temperature steady in your house between 21 and 25 °C.

Use timers and dimmers for appliances and heating systems.

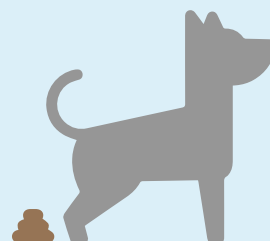

Choose native, drought-tolerant plants as they adapt to normal variations in local weather and need less water. Collect rainwater, and water the plants in the morning or evening while it is still cool.

Use public transportation. The energy consumption of private vehicles accounts for 12% of total energy consumption.

Pick up after your pet and dispose of the waste in the nearest trash can. Walk your dog on a leash. Take good care of your pet, we are what we do!
